

Security

Cut down on your losses with the **tattletale™ wireless security system!**

Protect your business or entire job site 24/7 with the tattletale alarm system. Use it anywhere! Just plug the base unit into any standard wall outlet. No special wiring or additional installation necessary.

Portable. You can move the system from one location to another at any time. Twelve hour internal battery back-up works when power is off.

Cellular technology enables a wireless data link to send the alarm signal. This signal is a one-way data packet that travels over the digital data control channel of the existing cellular network. No dropped calls and no phone line to cut!

Wireless. You can add up to 16 wireless sensors (optional accessories) for each tattletale base unit and place them up to 2,000 feet from the unit. Tattletale offers sensors that work indoors or outdoors.

- Protect your entire job site with installed accessories.
- Available for sale
- 24/7 monitoring
- No phone line required
- No false alarms
- Sensor range of 2,000 feet
- Completely transportable.
